EDUCATION

Bachelor of Science in Computer Science

2022-Present

Major in Data Mining

Isabela State University Main Campus

PROJECT WORK

GAS (Guided-Adaptive Smoothing) Forecasting System – Thesis (2025)

Thesis Project | C# Backend

Designed and implemented a hybrid forecasting system combining SES and Holt-Winters using a moving window approach. Manually implemented forecasting logic in C# to deeply understand model assumptions and behavior. Computed multiple error metrics per window to adaptively select the best-performing model. Structured forecasting logic into backend services for clarity, maintainability, and correctness. Focused on performance and explainability of forecasting results

TECHNICAL SKILLS AND QUALIFICATIONS

Programming & Development: C#, ASP.NET Core, OOP, REST API development, Entity Framework Core, Dependency Injection

Data & Forecasting: Time-series analysis, Data Mining, Excel-based Model Validation

Tools & Productivity: Git/GitHub, Microsoft Excel, MS Word, Swagger UI, Visual Studio / Visual Studio Code

CAREER OBJECTIVE

Fourth-year Computer Science student seeking On The Job Training (OJT) / Internship, where I can contribute to software development and data-driven solutions while continuously learning in an agile, innovation-focused environment. Passionate about building systems from the ground up and deeply understanding how technology works.
